

I Need To FLOC My Pool!

- #1) Follow "My pool is Green" directions first
- #2) Pour 1L of C-Clear (2L for large pools or problem pools) around edge of pool.
- #3) Run pool for 2-4 hrs (on the normal 'filter' setting) then TURN OFF PUMP
- #4) Do not disturb pool water for 8-24 hrs. and cloudiness will clump together and sink to bottom of pool.
- #5) Once water is clear and debris has settled, ready your manual vacuum.
- #6) Set dial valve to "Waste" or "Drain" setting and slowly suck out all of the fallen debris. * Add garden hose to the pool during this time to make up water loss.
- #7) As the water level approaches the bottom of the skimmer, stop and allow the pool to re-fill and the stirred up debris to re-settle to the bottom.
- #8) Continue this way until all of the debris has been vacuumed to the drain.
- #9) Re-fill the pool to 1/2 way up the skimmer and re-test the water at the Oasis to regulate the proper mineral balance.
